I finally got my hands on the actual data released by the FDA under court order. This is just the first 500 pages and as I mentioned at the rate of 500 pages per month it will take about 55 years. Regardless, this first data release is **both stunning and very upsetting**. The most important data is 38 pages titled “ 5.3.6 CUMULATIVE ANALYSIS OF POST-AUTHORIZATION ADVERSE EVENT REPORTS OF PF-07302048 (BNT162B2) RECEIVED THROUGH 28-FEB-2021”

Now keep in mind, the US started the roll out of Pfizer shots on Dec., 14, 2020 and this report is up to the end of February so it involves 2 and 1/2 months and early days with a small fraction of doses compared to today. Also, keep in mind this is just Pfizer data, nothing from the other shot makers thus far. I am going to provide one table and give some comments and provide a link to a Doctor that reviews it with more insight than I have. I am so disturbed with this new data, I had to get it out quickly. **Very important, this is Pfizer's own data, not VAERS or CDC whatever, but Pfizer admitting to all these adverse effects and deaths.**

Table 1. General Overview: Selected Characteristics of All Cases Received During the Reporting Interval

	Characteristics	Relevant cases (N=42086)
Gender:	Female	29914
	Male	9182
	No Data	2990
Age range (years): 0.01 -107 years Mean = 50.9 years n = 34952	≤ 17	175 ^a
	18-30	4953
	31-50	13886
	51-64	7884
	65-74	3098
	≥ 75	5214
	Unknown	6876
Case outcome:	Recovered/Recovering	19582
	Recovered with sequelae	520
	Not recovered at the time of report	11361
	Fatal	1223
	Unknown	9400

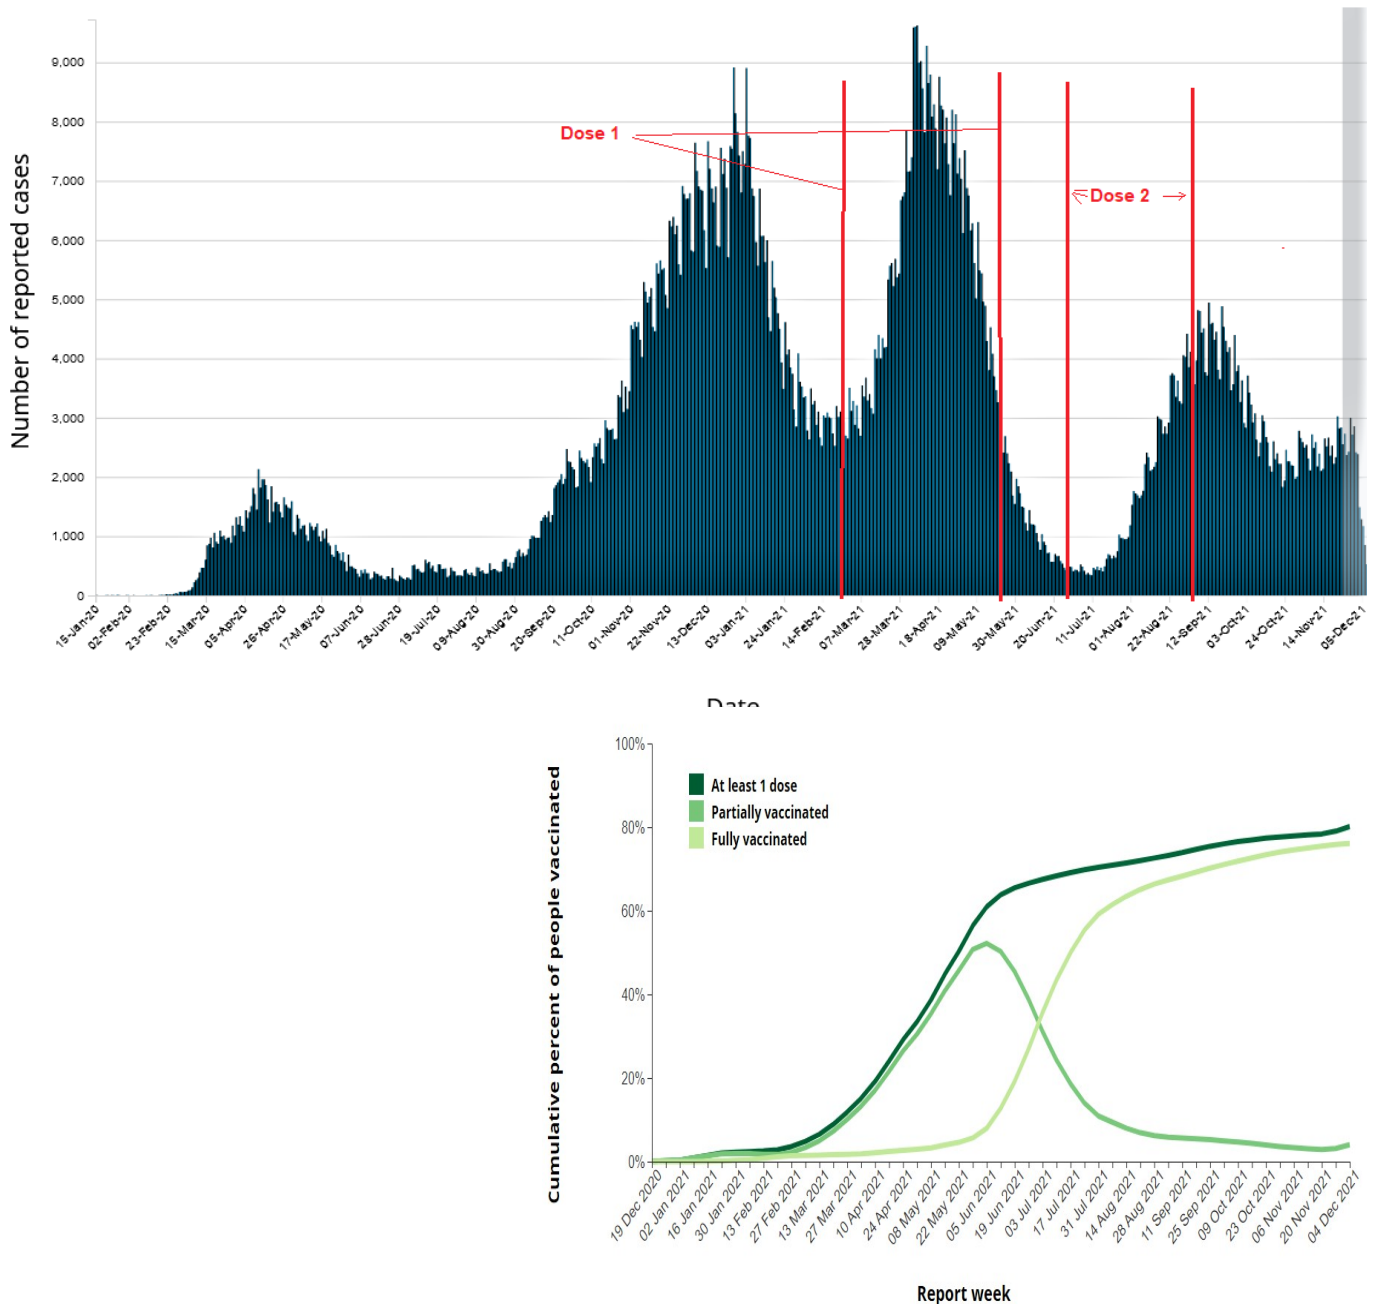

a. in 46 cases reported age was <16-year-old and in 34 cases <12-year-old.

Under gender, note about three times as many females badly affected, no explanation why. Case outcome, as end of February there was 1,223 dead and 520 recovered with sequelae. That means they have a permanent disability or condition. What is more scary, 11,361 not recovered at time of the report (February 28, 2021). This means the death number and 'with sequelae' will rise. There was also very disturbing data with pregnant women. Also children that should not have got a shot at this time, but somehow did so.

There is no doubt now that **Pfizer shots are very very dangerous**. What is even **worst, this data was hidden by the FDA, CDC, Government and Public Health including Canada**. **People have no clue of the risks involved**. Very important [Video with Dr. Daniel Nagase from Canada](#), who got the boot going against the narrative & using Ivermectin.

Canada has a very unique data set because we were the only country to space out the 2 doses 3 to 4 months apart. This also reveals very disturbing data that is not as obvious in all other countries. Both charts are from Health Canada. The top one is cases since January 2020 and the 2nd one is vaccine roll out since December 2020. I tried to squish that chart to line up the dates best I could with the cases chart.

Figure 3. COVID-19 cases (n=1,811,673 ¹) in Canada by date ² as of December 10, 2021, 7 pm EST (total cases ³)

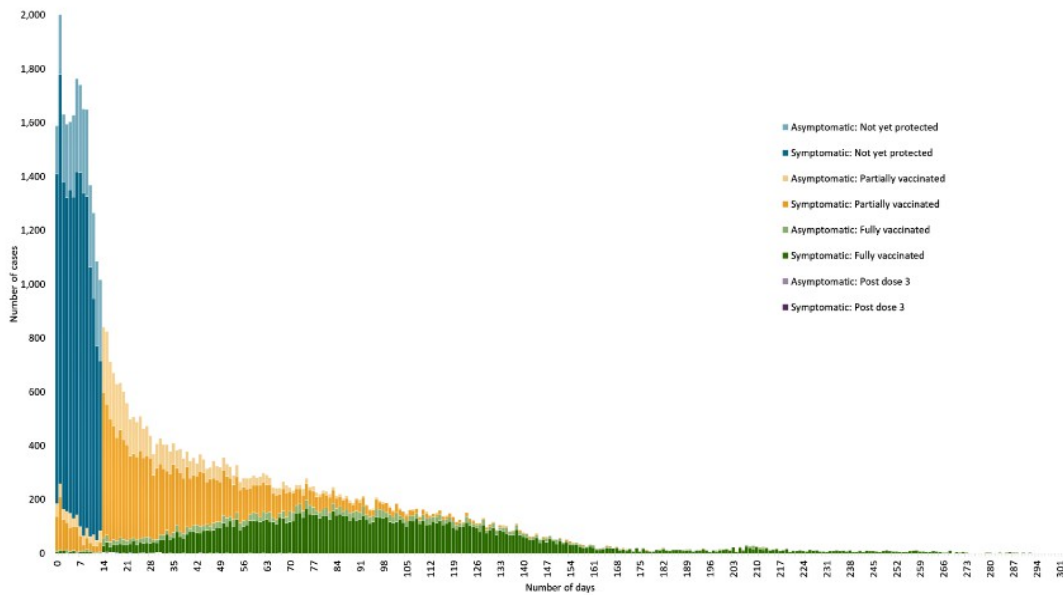

Look what the data is telling us. Covid cases surged in the typical winter flu season of 2020 and then started to come down towards spring in March. We then started rolling out the first dose from early March to end of May and cases surged during that time. They went to lows in summer, typical, but we then began rolling out dose 2 in June into August/mid September, the cases surged again in this period and not in a flu season. There are only 2 conclusions that can be drawn from this data. **The shots are either causing Covid-19 or they are causing other problems and health officials are covering up and calling it Covid-19.**

Is twice just a fluke? We will soon find out with the 3rd dose and I don't think the 3rd time will be a charm. There is a lot of strange things going on with these experimental shots. As I keep saying it is early days into this experiment, but learning more all the time.

These are not my numbers, but Health Canada numbers. As I say, numbers don't lie, but politicians do!

This surge shown in Canada above also goes along with what Ontario Public Health revealed in this chart. The blue lines spiking up are Covid-19 cases 0 to 14 days after dose 2. The yellow lines are after dose 1. They gave no explanation in the Ontario Public Health Report.

Figure 1. Confirmed post-vaccination cases of COVID-19 by number of days between dose administration and symptom onset: Ontario, December 14, 2020 to November 14, 2021

Notes:

1. Post-vaccination cases are shown as per the Definition of Terms. Partially vaccinated cases are shown as 14+ days after dose 1 and 0-13 days after dose 2. Breakthrough cases are shown as 14+ days after dose 2 and 0-13 days after dose 3. Post-dose 3 cases are shown 14+ days after dose 3.
2. Post-dose 3 cases are included in the figure, however, the numbers are small (refer to Table 1).

Please feel free to pass on, people need to know the truth and what real risks are.

P.S. I can't imagine what the side effect and death data will be when we learn data up to the current date and from all the other EUA shot makers making \$trillions.
