It is not easy to write this and it is a **very very** controversial topic, but it should not be. Many of my friends and family took the two doses, many others did not. Right from the beginning I understood older people taking these shots as they need not be concerned of unknown longer term side effects. Many others were coerced to take shots for one reason or another. That is all history and now we face new choices, giving shots to kids and taking the 3rd dose, the so called booster. **Regardless of that, the wheels are in motion for a collapse in our health care system this winter.**

I decided to do my Covid related articles a bit different and start with an abstract of main points. You can read further on for the facts and evidence that supports it. There is so much propaganda and BS surrounding this topic, I take no article on any side at face value. I dig for the facts behind it to see how real it is. I also thank all those who forward info. I use to only receive info and articles related to stocks and the economy, but now the Covid-19 related articles out number them 10 to 1. Obvious this big on your mind.

Abstract: News starts to break that most hospitalizations and death are the double dosed. Dr Fauci admits vaccines are not working well and we just have to figure out how to make them work. Variants are a problem but he is pounding the table for booster shots that will have the same variant issue. Conflicts of interest abounds with those so called medical experts in main stream media. More data and numbers show that something is wrong with these experimental shots, but does not stop Emergency Use Authorization for Boosters. If the first 2 shots didn't work, why would the 3rd, it is the exact same thing.

I am going to start with a number of important news articles, not heard much in main stream media.

Canada's mainstream media has been using a [Calgary doctor in their stories about COVID-19 vaccines](#) for kids, without disclosing he has received close to \$2 million in funding from drug maker Pfizer.

Kamloops BC, of the 36 patients who have tested positive in the four concurrent COVID-19 outbreaks at Royal Inland Hospital, 31 were fully immunized, two were partially immunized and three were not vaccinated. There have been three deaths, but they don't reveal if double dosed or not. The fact that was not mentioned, speaks for itself.

[Hero Surgeon Dr Irfan Hamlin, 45, passed away at Royal Brompton Hospital in London](#) on November 14 with Covid-19, he was double dosed.

[WHO warned Europe was only region in the world where deaths had increased](#). Germany has seen a record-breaking number of cases, with 68,366 new infections on Thursday - a colossal 40 percent rise on the same day last week. European countries are running around a 70% to 75% at fully vaccinated, yet Covid cases and deaths have begun to soar.

[Austria threatens mandatory vaccine law by February 1st](#) or face some kind of penalty. The opposition party calls it communism. Meanwhile they will lock every thing down on Monday vaccinated or not. Non-essential shops will be closed along with most workplaces and schools. Previously, the measures had only applied to unvaccinated people. Tens of thousands are protesting breaking into some riots.

Remember Dr. Fauci is a co-holder on a Moderna vaccine patent. Of course Fauci just beats the drum for a booster. [The nation's top infectious disease expert says](#) that COVID-19 hospitalizations are rising among people fully vaccinated who have not had booster shots. Dr. Anthony Fauci, the director of the National Institute for Allergy and Infectious Diseases, said waning immunity from the initial shots is leading to a rise in severe cases among immunized Americans.

I saw a number of articles that [Fauci admitted in a NY Times interview](#) that vaccines don't work. So I listened to the interview myself and have a few of the most important highlights. My comments will be in red.

Whats gone wrong?

Fauci: Delta really spreads, 60M+ unvaccinated, waning immunity against infection and hospitalization and to some extent death are now in all age groups. Its waning, I don't say they don't work, we have not given it the full rein to make them work, boosters will be essential.

Booster will be an essential part. Have to boost everyone. No time to do study. Booster an absolute essential. Could be like Hepatitis B, need multiple shots.

Why is it your preference not to do mandates? Fauci: I am an idealist, but a realist that supports mandates

Mandates are opposed by courts, what other tools are left. Fauci: Not much, 46 million infections and probably more. Vaccines highly effective and safe.

He never mentions a word about natural immunity. I wonder why? Maybe because he holds a Moderna patent and makes a fortune on that vaccine.

What happens if 1/3 don't get vaccinated? Fauci: All pandemics burn out, you can do things to have less deaths or do not. Far right press attacks him. It will burn out but not sure when, maybe a year or so?

Why is someone like a public health (himself) always getting attacked and threatened? **I have the answer, because anyone that questions the shots or treatment is also attacked and threatened. Fauci, you still have your job, many others on the other side don't.**

Fauci: Those who do get good information do trust us. **What a joke!!!!!!!!!!!!**

What about next few weeks, holiday travel and colder weather, with there be a big spike???

Fauci: It is very very clear, the burden is on the unvaccinated except waning immunity, need boosters. Unvaccinated will have tough time in winter. But more infection means the vaccinated will be at risk.

As you probably heard, both Pfizer and Moderna got an Emergency Use Authorization for a 3rd dose, a booster for everyone 18 and older. [Moderna, Inc.](#) (Nasdaq:MRNA), a biotechnology company pioneering messenger RNA (mRNA) therapeutics and vaccines, today announced that the U.S. Food and Drug Administration (FDA) has extended the emergency use authorization of a booster dose of the Moderna COVID-19 vaccine at the 50 µg dose level to all adults aged 18 and older. This booster can be used in all individuals 18 years and older who have completed a primary vaccination with any other authorized or approved COVID-19 vaccine.

My question, if these vaccines are approved and it is well known fact the booster is actually identical to the first 2 shots, why are they EUA only and not approved? The fact is the approved vaccines are phantoms. I have found no evidence on the FDA web site that approval conditions for manufacturing have been met yet, and certainly no approval for sales and distribution.

I watch some main stream media on weekends, a bit of news, sports and my TV in the shop. All the video shots shown on TV are the EUA vaccines, not one video shot showing the names of phantom approved shots.

For Sports Fans

I have been a long time fan of hockey, football and skiing. I have watched thousands and thousands of games and saw numerous severe injuries and players carried out on stretchers. Some of those when I coached or participated. And many all so vivid in my memory because they were so astounding and frightful. I still see the hit on Joe Theisman that ended his career. [You can even view some bad ones on youtube.](#)

Injuries in sports are very common, but what is rare is to see young healthy athletes die during a game or practice. There is maybe a couple each year and most often it is some underlying health problem that was not known or a heart attack.

Now get ready for this. This is not an exaggeration, I verified over 25 of these and all panned out true. I did not want to publish this list in the newsletter, kind of morbid and perhaps not respectful to these poor souls. I loaded the list as a blind link here if anyone wants to verify data. [About 90 young athletes have died during sporting events/games or practices. Yes 90,](#) dropped dead in front of thousands of witnesses and fans. What do they have in common? It is pretty much all heart problems and the majority die. And as you know with most team sport protocols, they had to take the shots. You listen or watch the news clips and they mostly say this is very rare, no explanation, don't know what happened. There is probably over 90. I don't know who came up with the list and if they caught most of them, but the year is not over yet either.

You can watch a short video clip here. <https://www.brighteon.com/8c15ad97-9317-4f85-97c1-87e451d7abe3>. This guys videos are too long and he talks too much. I am not a great fan, so just go to the 25 minute 40 second mark. **I have not verified the video and if the examples there are on the list of 90 or so.**

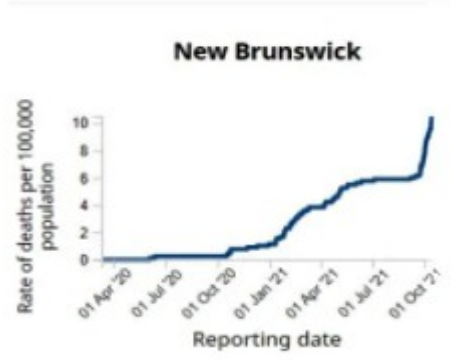

I came across a [CBC news report on New Brunswick](#) and they admit the majority dying now are vaccinated. Of course the Title says only 1 in 5 deaths are fully vaccinated, but they are using data back to when Covid-19 began in March 2020. There is no such thing as an unvaccinated death before a vaccine is invented.

They don't say it is mostly vaccinated and the title is total BS, but anyone with a grade 5 math level can do the math with the numbers they provide. A total of 84 deaths since Covid-19 started and 17 were fully vaccinated, oh only 20%. However the article goes on to say there were 30 deaths by April 1st and there was 42 deaths by May 18th 2021 when the vaccine was available.

Checking the [New Brunswick web site](#) and it says 122 covid related deaths so quite a conflict in information. It also shows their vaccination rate is 86.7% with most getting their 2nd shot by August some time. Going by 12 more deaths from April 1 to May 18th, we would have at least 15 more in 3 months to mid August when the majority were double dosed, which gives 57 deaths pre double dose. That leaves 27 deaths during the vaccinated period to get to 84 total. **They report 17 deaths were double dosed, so over 60% (17/27) of deaths were among double dosed.** The CBC article also claims 'The government does not announce vaccine status with new deaths' The reason is obvious and here is the real scary part like we see in the UK.

The CBC showed this nice little chart in their article. I cut and pasted.

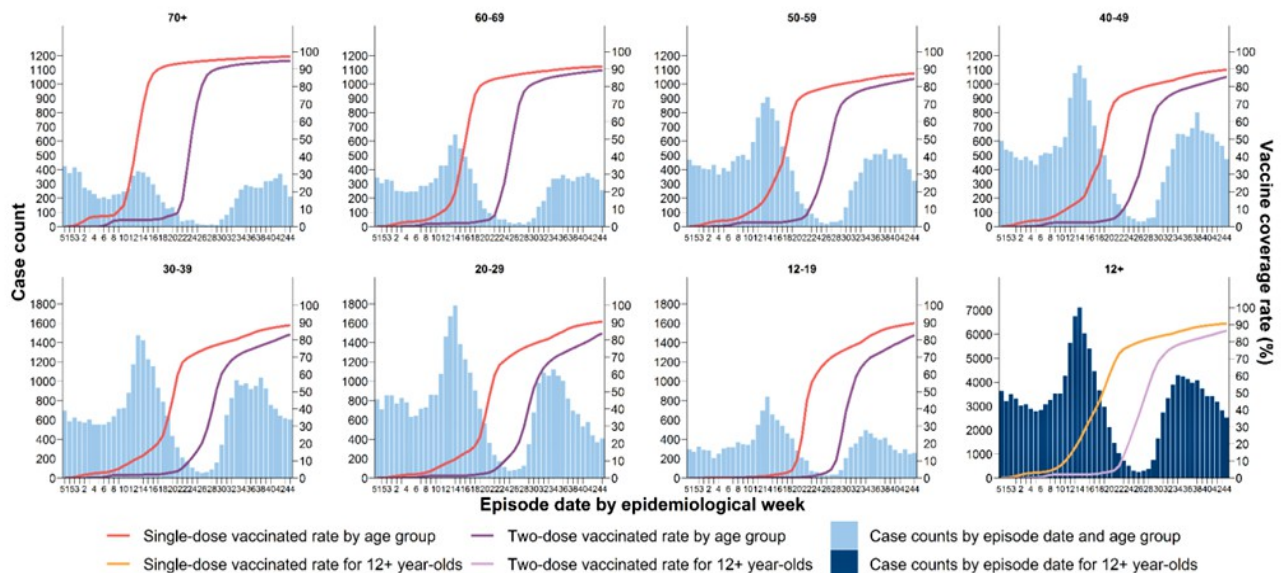

New Brunswick was 10 per 100,000 population as of October 14, 2021.

Note how the death rate has jumped from just under 6 per 100,000 to 10 since about 86% have been double dosed. The death rate has actually almost doubled since the so called vaccines. An effective vaccine should bring the death rate down, not push it up. This is very terrible news/data, right from New Brunswick public health. They simply just don't mention this in main stream media.

Most provincial public health units are no longer providing cases, hospital and death statistics by vaccine status. **That is a huge red flag.** This is what was posted on Ontario Public Health, my bolding on vaccination status. "As of November 12, 2021, routine Variants of Concern (VOC) PCR testing of positive COVID-19 samples is no longer being conducted. Eligible positive COVID-19 samples will now be forwarded for whole genome sequencing. Starting on November 16, 2021, VOC and mutation data will be removed from the daily/weekly epidemiological summaries, PHO's COVID-19 data tool, and the enhanced epidemiological summary, **Confirmed cases of COVID-19 following vaccination in Ontario.** The enhanced epidemiological summary, *Estimating the Prevalence and Growth of SARS-CoV-2 Variants in Ontario using Mutation Profiles* will be discontinued as of November, 17, 2021. "

Figure 8. Weekly age-specific single-dose COVID-19 vaccine coverage and case counts by epidemiological week, BC Dec 13, 2020 (week 51) – Nov 06, 2021 (week 44)

Data sources: health authority case line list data and PHSA Provincial Immunization Registry

BC still had some data by vaccine status shown in the above chart. I thought I should grab it before they stop all vaccine related reporting too. What should you note from this? **The infection counts in all age groups are approaching the highs we saw in the last cycle when hardly anyone had these shots and we are no where near the peak of this cycle and flu season. It is very obvious the shots have no positive effect and we are no where near their so called 6 month waning time frame.**

I know, the narrative says they prevent hospitalization and death, but there is no good evidence of that at this point. As I keep saying we are only about 6 months into this experiment. **And, as I pointed out with UK data last week and New Brunswick above, these shots are showing evidence they are more harm than good.**

I know this sounds terrible, and **most don't want to believe it.** I don't put a narrative on numbers and twist them around, but just report what it is. They are not my numbers, but government's own data.

You only have to ask your self one simple question. How can there be a record amount of cases or approaching records, rising hospitalizations and deaths when in these locations the vaccination rate is some where between 70% and 90% double dosed, depending where you are? If you think it is unvaccinated, you are sadly naive.

For this report, [just one video that you should watch, an interview with Steven Kirsh.](#) He took both doses but later was stunned on the info he found out. There is a lot of good data and information in this interview. Steven Kirsh is a tech millionaire and he set up an advisory board of 14 scientists and raised millions to fund research on early Covid-19 treatments, but along the way he discovered something very very bad about the shots. The covid funding is how he ended up getting involved in research.

And just one more thing because I am finding this new fact checker thing a complete laughing stock. Now I will not waste my time looking at one of them. **I figured out what a Fact checker is – better at lies.** This goes back to May [when Tucker Carlson on Fox news reported about VAERS \(No Questions Allowed\).](#) And fact checkers attacked him. He did not claim any numbers, he simply reported what numbers were on VAERS. No data base in record keeping is totally accurate, there is always some margin of error. He is not wrong because a few samples in the data were not accurately related to Covid, probably about the same amount of errors reported with influenza vaccines or shingles vaccines for example.

That Tucker Carlson show still very relevant to today. He also reports why the swine flu vaccine was halted.

There are some simple obvious conclusions:

- These shots don't prevent infections and we will not end the pandemic and we will not get back to normal that government and public health officials promised early this year, if you take the shots;
- The reduction in hospitalization and deaths will be another broken promise or lie;
- The adverse effects and deaths from the shots are multiple times higher than admitted;
- The 3rd dose is no different than first two. They don't work and neither will the 3rd;
- We will be back to square one, locked down and non essential business shut this winter, vaccinated or not;
- Soon you will not be consider fully vax'd unless you have 3 doses;
- And finally the outcome of this EUA experiment is starting to show shots do more harm than good.
